

DESIGNED WITH THE FUTURE IN MIND Powered by Nano Hybrid Pure Glass

As a manufacturer and distributor for the professional car care detailers, their opinions are a powerful source for us to continue to produce the best quality products. The creation of Zen-Xero came from communication with over 10,000 customers at home and abroad, to develop a revolutionary glass coating, with much improvements over existing coatings currently on the market. Zen-Xero has finally been released after a long developing process to meet the highest demands of customers for the best quality product.

Deep Wet-Looking

You will notice how stunning Zen-Xero is.

The deep shining appearance, along with the performance of the super high water repellency after applying Zen-Xero, the results are pure stunning and absolute satisfaction; thanks to the Nano hybrid layer.

Super - High Water Repellent Layer

One of the key features of Zen-Xero is its ability to form a high contact water droplet angle over 100 degrees on the painted surface. The newly developed fluoride layer of Zen-Xero- β , boosts water repellency and also creates a great looking water beading appearance on the surface. Zen-Xero- β is strongly bonded to the polysilazane(PHPS), material of Zen-Xero and produces a super high water repellency on the paint work.

Crystal Gloss

There is no amazing product like Zen-Xero. The high quality glass layer of the nano-technology produces a deep crystal gloss on your vehicles' surfaces using basic chemical theories.

Zen-Xero- α referred to as our nano hybrid layer, combinining the hardness and durability of the inorganic and weather resistance of the organic. When the special fluoride coat layer in the Zen-Xero- β is applied over Zen-Xero- α , it gives the Zen-Xero its super-high repellency making it an ideal coating for your vehicle.

Zen-Xero fuses organic and inorganic materials by a high technology. The nano hybrid glass layer is made by the chemical reaction shown below method. Plus, fluoride water-shedding agent produces super-high water repellency.

PHPS (Per-hydro polysilazane) + MHPS (Methyl-hydro polysilazane)

Effective For Dark Colored Painted Surface

Much different than other existing glass coatings, Zen-Xero was formulated for effective application on dark colored vehicles (which tend to leave streaks and smudges). The uniform layer and great finish that it produces is superbly ideal for dark colored OEM paints.
